

## CABRA/SKINFLEX

---

High-quality covermaterial based on leather fibers. In addition to a high proportion of leather fibers, it contains natural tannins, modified natural fats, organic dyes and natural latex as binders. The surface is finished with a leather adjustment. Therefore organic and inorganic pigments with a water-based primer and a finishing lacquer based on cellulose nitrate are used.

### Product features

---

- \_ high quality consistency
- \_ exceptional aging resistance
- \_ suitable for hot foil embossing and blind embossing
- \_ very good for gilding
- \_ can be screen printed
- \_ Round corners and well fold possible
- \_ dirt repellent
- \_ durable
- \_ pleasant, leather-like touch
- \_ in comparison to leather easy to process

Leather fiber is a product made from over 90 percent natural raw materials as well as various types of leather remnants. Deviations and tolerances in color, softness, handle and appearance as well as minor inclusions are inherent in the nature of the product and cannot be influenced.

The special finish **nubuk N** is only limitedly suitable for embossing with silver, gold and color foil. We recommend previous tests or UV varnishing. **nubuk T** is suitable for foil embossing, we recommend previous tests.

The **spectro** dressing (two-component dressing) is purely water-based with an **extremely high abrasion resistance**.

As edible oils and fats can attack the surface of CABRA natur and CABRA nubuk, these finishes are not suitable for menus. We exclude a liability.

The production takes place in Germany following DIN ISO 14001 and 50001, EMAS and OekoTex and according to the requirements of REACH.

In addition, all environmentally relevant requirements are carefully taken into consideration during production, which also takes account of REACH requirements.

### Product applications

---

Covermaterial for

- \_ Diaries, Notebooks, Timer
- \_ Folders
- \_ Menu Cards
- \_ Packagings
- \_ Bibles and Hymnbooks
- \_ Dictionaries and Encyclopedias
